```
construction kit. Complementary DNA was synthesized from mRNA using a poly (dT) sequence with a NotI restriction site. SalI linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORTI vector. The ligated cDNA fragments were transformed into E. coli ElectroMax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

//Clone_lib="Gm-cl019"
//Clone="Vector: pspORF1 (Life Technologies); Site_1: Not I;
Site_2: Sal I; This CDNA library was constructed from mRNA
isolated from immature seed coats (200-300 mgs) of
greenhouse grown plants. The library was prepared using
the Life Technologies pSuperScript cDNA library
construction kit. Complementary DNA was synthesized from
mRNA using a poly (dT) sequence with a Not I restriction
site. Sal I linker adapters were ligated to the
blunt-ended cDNA fragments followed by Not I digestion.
The cDNA fragments were directionally cloned into the Not
I-Sal I restriction site of the pSPORTI vector. The
ligated cDNA fragments were transformed into E.coli
ElectroMax DH10B host cells (Gibco BRL). This library was
constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (bases 1 to 539)
immature cotyledons of greenhouse grown plants (individual seed fresh weight of 100-300mg). The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly (dT) sequence with a NotI restriction site. Sall linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-Sall restriction site of the pSPORTI vector. The

/clone="vector: pspORT1; Site 1: Sali; Site 2: Not1; This /note="vector: pspORT1; Site 1: Sali; Site 2: Not1; This cDNA library was constructed—from mRNA isolated from immature cotyledons of greenhouse grown plants (individual seed fresh weight of 100-300mg). The library was prepared using the Life Technologies psuperscript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a Not1 restriction site. Sall linkers adapters were ligated to the blunt-ended cDNA fragments followed by Not1 digestion. The cDNA fragments were directionally cloned into the Not1-Sall restriction site of the pspORT1 vector. The ligated cDNA fragments were transformed into the illgated cDNA fragments were illgated to the illgated cDNA fragments were illgated to the illgated cDNA fragments were illgated to the illgated cDNA fragments were

/Clone lib="Gm-r1030"
/Note="Vector: pSPORTI; Site 1: SalI; Site 2: NotI; This
/DNA library was constructed from mRNA isoTated from
immature cotyledons of greenhouse grown plants
(individual seed fresh weight of 100-300mg). The library
was prepared using the Life Technologies pSuperScript cDNA
library construction kit. Complementary DNA was
synthesized from mRNA using a poly(dT) sequence with a
NotI restriction site. SalI linkers adapters were ligated
to the blunt-ended cDNA fragments followed by NotI
digestion. The cDNA fragments were directionally cloned
into the NotI-SalI restriction site of the pSPORTI
vector. The ligated cDNA fragments were transformed into
E. coli ElectroMax DH10B host cells. This library was
constructed by Dr. Lila Vodkin and Dr. Anu Khanna. Note
that Gm-r1030 is a re-rack of Gm-c1007."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            State University

/note="Vector: pSPORT1 (Life Technologies); Site_1: Not I;
Site_2: Sal I; This cDNA library was constructed from mRNA
isolated from immature seed coats (200-300 mgs) of
greenhouse grown plants. The library was prepared using
the Life Technologies pSuperScript cDNA library
construction kit. Complementary DNA was synthesized from
mRNA using a poly (dT) sequence with a Not I restriction
site. Sal I linker adapters were ligated to the
blunt-ended cDNA fragments followed by Not I digestion.
The cDNA fragments were directionally cloned into the Not
I-Sal I restriction site of the pSPORTI vector. The
ligated cDNA fragments were transformed into E.coli
ElectroMax DH10B host cells (Gibco BRL). This library was
constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

//note="Vector: pspORT1; Site 1: Not I; Site 2: Sal I; This /note="Vector: pspORT1; Site 1: Not I; Site 2: Sal I; This cDNA library was constructed from mRNA isolated from very young cotyledons (20-50mgs fresh weight) of greenhouse grown plants. The library was prepared using the Life Technologies psuperscript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a Not I restriction site. Sal I linker adapters were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The cDNA fragments were directionally cloned into the Not I-Sal I restriction site of the pspORTI vector. The ligated cDNA fragments were transformed into E.coli Electromax DH10B host cells. This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."

           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB DB

Publication No. US2003074685A1
GENERAL INFORMATION:
APPLICANT: Hitz, William
APPLICANT: Sebastian, Scott
APPLICANT: Sebastian, Scott
APPLICANT: Streit, Leon
ITITLE OF INVENTION: SOCHEAN PLANT PRODUCING SEEDS WITH REDUCED LEVELS OF RAFFINOSE
ITITLE OF INVENTION: SACCHARIDES AND PHYTIC ACID
ITILE REFERENCE: BB-1077-C
CURRENT APPLICATION NUMBER: US/10/025,003
CURRENT FILING DATE: 2002-05-07
PRIOR APPLICATION NUMBER: US/835,751
PRIOR APPLICATION NUMBER: B, 1997
PRIOR APPLICATION NUMBER: PCT/US98/06822
PRIOR FILING DATE: APRIL 7, 1998
NUMBER OF SEQ ID NOS: 16
SOFTMARE: Microsoft Office 97
SEQ ID NO 1
LENGTH: 1760
TYPE: DNA
ORGANISM: Glycine max

Sequence 116597, Application US/10424599 Publication No. US20040031072A1 GENERAL INFORMATION:

APPLICANT: La Rosa Thomas J
APPLICANT: Kovalic David K
APPLICANT: Zhou Yihua
APPLICANT: Zhou Yihua
APPLICANT: Cao Yongwei
TITLE OF INVENTION: Soy Nucleic Acid Molecules and Other Molecules Associated
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
FILE REFERENCE: 38-21(5323)B
CURRENT APPLICATION NUMBER: US/10/424,599
CURRENT FILING DATE: 2003-04-28

CC phosphate. The invention also relates to a chimeric gene operably linked Ct to suitable regulatory sequences, where expression of the chimeric gene Ct results in a decrease in expression of an endogenous or native gene Ct encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant Ct comprising the chimeric gene, a method of making the soybean plant, a soy protein product derived from the Ct genessing of soybean seeds, a method of making the soybean plant, a compressing of soybean seeds, a method of making or producing a soy crotein product and a method of using a soybean plant homozygous for at Ct least one gene encoding a mutant myo-inositol 1-phosphate synthase having cherased capacity for the synthesis of myo-inositol 1-phosphate. The Ct cacid fragment and methods are useful for producing plants with Ct decreased raffinose, stachyose and phytic acid content and increased contents phosphate content, leading to valuable and useful Ct soybean products. This sequence represents a mutant soybean myo-inositol Ct 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase having a decreased capacity for the synthesis of myo-inositol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-APR-1999; 99US-00299315.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                               The invention relates to a nucleic acid fragment encoding a soybean myo-
clinositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
cynthase having a decreased capacity for the synthesis of myo-inositol 1-
cynthase having a decreased capacity for the synthesis of myo-inositol 1-
cynthase having a decrease capacity for the synthesis of myo-inositol 1-
cynthase having a decrease in expression of an endogenous or native gene
cynthase and pyo-inositol 1-phosphate synthase, a soybean plant
cynthase and pyo-inositol 1-phosphate synthase, a soybean plant
cynthase and product derived from the
cynthase and increased capacity for the synthase and plant be
cynthase and increased capacity for the synthase of myo-inositol 1-phosphate synthase having
cynthase encoding a mutant myo-inositol 1-phosphate with
cynthase dapacity for the synthesis of myo-inositol 1-phosphate. The
cynthase and increased
cynthase and methods are useful for producing plants with
cynthase and increased
cynthase and increased
cynthase and phytic acid content and increased
cynthase and increased
cynthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB; ADQ14490.
